EDUCATION

Institute of Engineering & Science, IPS Academy, Indore

Jul 2023 – Apr 2027

B.Tech – Computer Science & Engineering (AI & ML) | CGPA: **9.11 / 10.0**

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, DBMS, OOP, Software Engineering

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, TypeScript

Distributed & Backend Systems: FastAPI, REST APIs, GraphQL, Microservices, Docker, GCP, CI/CD (GitHub Actions)

AI / ML: TensorFlow, Scikit-learn, LLMs, RAG, LangChain, LlamaIndex, CNNs, OpenCV

Frontend: React, HTML5, Tailwind CSS, Sass CSS, Shadcn UI

Databases: PostgreSQL (Supabase), VectorDB, MySQL, SQLite

Tools & Concepts: Git & GitHub, VS Code, Power BI, OOP, DBMS, Multi-threading, Synchronization

EXPERIENCE

Technical Intern | Rakuten

Dec 2025 – Jan 2026

- Built production-grade FastAPI backend with async patterns integrating Gmail API and Google Calendar API for concurrent email retrieval, real-time categorization, and automated scheduling
- Implemented LLM-driven intelligence layer (Groq LLaMA) enabling **4 automation workflows**: email summarization, smart categorization, task extraction, and calendar event scheduling with persistent session context
- Developed **multi-format document parser** (PDF, OCR, text extraction) with robust error handling, supporting production reliability and graceful degradation on malformed files
- Managed conversation state and session persistence using SQLite, enabling context-aware interactions across concurrent async email processing operations
- Tech Stack:** Python, FastAPI, LLMs, Groq (LLaMA), Gmail API, Google Calendar API, SQLite

PROJECTS

CropScanAI – AI Crop Disease Detection System

Sept 2025 – Dec 2025

- Built and trained a CNN-based disease detection model using TensorFlow/Keras, achieving **92% training accuracy** and **90% validation accuracy** on pearl millet grain disease classification
- Developed a Flask-powered web application supporting real-time image upload and inference workflows
- Applied image preprocessing, normalization, and augmentation techniques using OpenCV and NumPy to enhance model robustness
- Implemented an end-to-end prediction pipeline from image acquisition to disease classification, reducing manual inspection effort
- Optimized model training across **10 epochs** while maintaining strong generalization performance on unseen validation samples
- Tech Stack:** Python, Flask, TensorFlow, Keras, OpenCV, NumPy

ACHIEVEMENTS & ACTIVITIES

- Academic Topper: 1st position in 2nd year at IPS Academy (CGPA 9.09 out of 10.0)
- Sports: 1st Place – Table Tennis, Department Level
- Actively contributed to team-based engineering projects, demonstrating collaboration, planning, and cross-functional communication
