OBJECTIVE

Computer Science and Engineering Student specializing in IoT. Proficient in Python, C, C++, with experience in EDA, preprocessing and visualization using Pandas and Numpy. Skilled in building IoT systems, AI-driven models, and scalable applications with strong problem-solving and analytical abilities.

TECHNICAL SKILLS

Programming Languages: Python, C, C++

Data Analysis : Data Preprocessing, EDA, Data Cleaning

Tools & Libraries: Pandas, NumPy, Git, SQL, Docker

IoT & Hardware: Arduino, IR Sensors integration, Servo Motor & Relay module control

PROJECTS

Polyp Detection using Deep Learning [GitHub](#)

- Developed a deep learning-based **semantic segmentation model** for colorectal polyp detection using U-Net and UNet++ architectures.
- Performed data preprocessing, exploratory data analysis, and model evaluation on the **CVC-ClinicDB** medical imaging dataset.

IoT-Based Smart Parking System | [GitHub](#)

- Designed and implemented a real-time smart parking system for efficient allocation of available slots.
- Collected and processed sensor data using IR sensors and Arduino microcontrollers to display live parking availability.

EDUCATION

Bachelor of Engineering – Computer Science and Engineering (IoT)

Aug 2022 - Jun2026

Institute of Engineering and Science, IPS Academy

CGPA: 8.69

CERTIFICATIONS

- [Python Web Developer Training \(Grade A+\) — Infosys Foundation & ICT Academy](#)
- [C, C++ Certified programmer](#)
